

Circular sightglasses for welding into or onto vessel walls, in version PN 0 / PN 2,5 with a viewing diameter equal to DIN 28120

Circular sightglass, DN 150, PN 0, with glass disc in sodium silicate to DIN 8902 and wiper of the series W, wiper blade in silicone

Circular sightglass similar to DIN 28120, DN 150, PN 2,5, with glass disc in sodium silicate to DIN 8902

Application:

The circular sightglass fittings are used for the observation and illumination of the inside of unpressurised vessels, silos, tanks etc. or such of a nominal pressure (PN) of 2,5 bar.

They represent, especially for large nominal diameters, a **cost-saving alternative** to the sightglasses of the pressure rates 6, 10 and 16 bar.

Viewing diameter:

80–225 mm

Operating conditions:

Pressure: No pressure (PN 0) resp. PN 2,5
 Temperatures: Max. 150 °C with glass disc in sodium silicate to DIN 8902
 Max. 280 °C with glass disc in borosilicate to DIN 7080

Materials:

Base flange: 1.4404 (AISI 316 L) (standard)
 1.4541 (AISI 321), RSt 37-2, H II or other materials on demand
 Cover flange: 1.4541 (AISI 321) (standard)
 1.4404 (AISI 316 L), 1.4571 (AISI 316 Ti), RSt 37-2, H II or other materials on demand
 Sightglass disc: Sodium silicate glass to DIN 8902 (standard)
 Borosilicate glass to DIN 7080 on demand
 Gaskets: KLINGERSil C4400, PTFE, Perbunan, Silicon, Viton, Gylon or other materials on demand
 Screws / studs and nuts: A2-70 (standard)
 A4-70 or 5.6 zinked on demand

Possible combinations:

The sightglasses can be combined with our centrally operated window wipers of the series W / WD / WDT, with the spraying devices of the series SVS (only version for PN 2,5) as well as with our sightglass light fittings of the series CHEMLUX, EdelLUX, miniLUX or fibroLUX for use in hazardous or safe areas. In these cases, the cover flanges are drilled and tapped to suit the respective light fitting fixation.

Special versions:

- Special high vacuum-tight version with additional O-ring seal
- Glass disc in quartz and special gaskets for very high operating temperatures

Contents of delivery:

The complete delivery consists of base and cover flanges, glass disc, gaskets for product and cover side and hexagonal socket head screws (version for PN 0) resp. studs and nuts (version for PN 2,5).

Certificates:

On request against extra charge, to DIN 50049, 3.1(B), alternatively 3.1A for the flanges, 2.2 or 3.1 for the glass discs.

Unpressurised version (PN 0)

* Not in stock.

Mounting:

After having correctly welded the base flange onto or into the vessel wall, the product side gasket, the glass disc, the cover side gasket and the cover flange are mounted one after the other and then the socket head screws tightened against the cover flange (version for PN 0) resp. the nuts against the studs (version for PN 2,5).

Attention: The base flange has to be welded into or onto the vessel wall without any distortion to ensure a plain and flat sealing surface to avoid the breakage of the glass disc. If necessary, rework the sealing surface after welding. The screws have to be tightened evenly and crosswise.

Branch office / exclusive agent:

Do you wish for more information about our wide range of light fittings for use in hazardous and safe areas, camera systems for hazardous areas, about our range of circular sightglasses to DIN 28120/28121, screwed sightglasses similar to DIN 11851, rectangular or D-ended sightglasses, sightglasses and light fittings for sterile applications STERI-LINE, pipeline flow indicators, centrally or sideways operated wipers, hinged sightglasses, spraying devices or our complete sight and lightglass units VETROLUX? Are you interested in other types, special versions or different protection degrees? If yes, please contact us, our branch office or our local agents – it is our business! You will find the necessary indications about our sales network on the Internet.

All dimensions in mm.

Subject to changes without preliminary notice.
